

TTXR SERIES

Technical Reference Guide

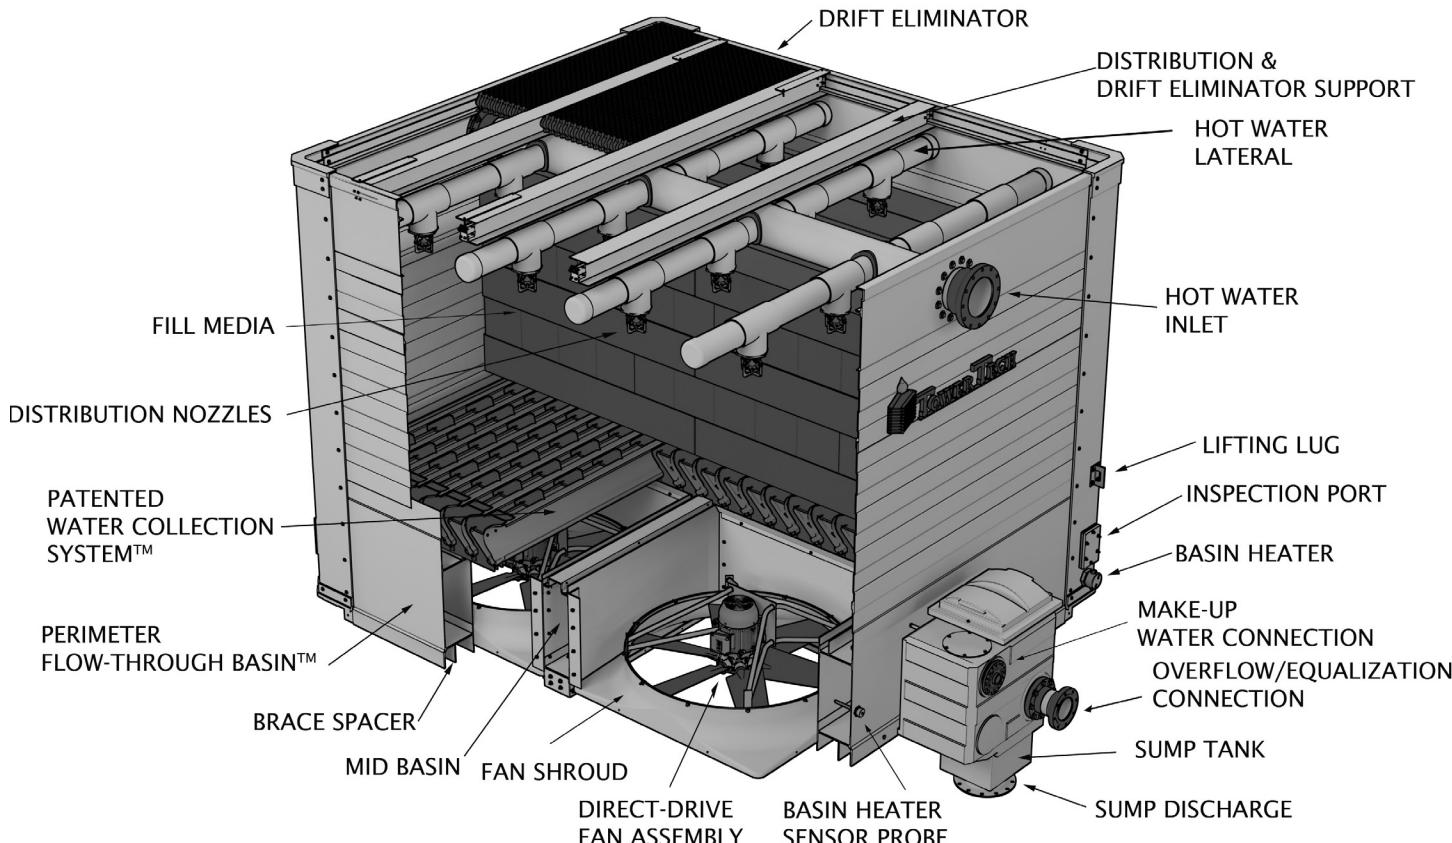

FILL MEDIA

TTXR SERIES

FEATURES:

The TTXR Series Modular Cooling was designed for the purpose of increased performance at design conditions, smaller footprint and reduced fan horsepower. The TTXR model is technically identical to the TTXL model with the same installation and operational benefits providing the lowest life-cycle cost of any cooling tower. The performance enhancements of the TTXR model are achieved by optimization of the water distribution system through dispersing smaller water droplets for increase surface area. The TTXR models are available in the same familiar module sizes of the TTXL series with modular plug and play interconnectivity to achieve any project size cooling requirements. The modular cooling tower design quickly accommodates future expansion of the cooling tower capacity.

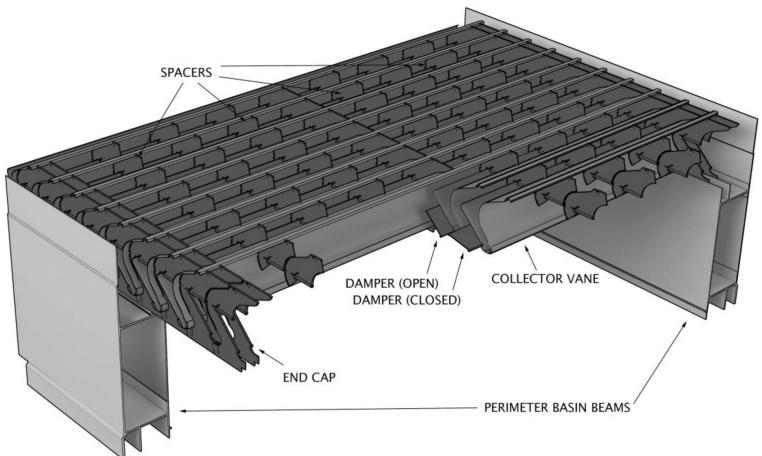

Unique Design Features Include:

- Fully Enclosed Flow-Thru Basin
- Variable-Flow Rotary Spray Nozzle
- Water Collection System
- Bottom Mounted Fans
- Factory Assembled Modular Design
- Completely Non-Corrosive Materials

The TTXR Series Modular Cooling Tower takes advantage of the benefits achieved with the TTXL design. The factory assembled modular design allows for quick installation in less than 1 hour with a pre-engineered certified substructure that reduces infrastructure cost. The modular towers are the most maintenance friendly cooling tower in the world. All routine maintenance can be safely performed from ground level. The Tower Tech series modular towers offer the lowest drift rate; combined with the flow-through basin and enclosed tower design, water usage and chemical treatment cost are significantly reduced. Tower Tech modular towers provide the longest life span of any factory assembled cooling tower with an industry best 15 year limited warranty. Combine all of these advantages with the energy savings achieved by Tower Tech's design and you have the best cooling tower available today.

Water Collection System™

TTXR's patented Water Collection System serves as an efficient collection chamber and conduit for channeling waterflow into the tower's Flow-Thru Basin™. Its unique shape aerodynamically moves inlet air into the fill media while effectively providing a leak free barrier protecting tower mechanicals.

Flow-Thru Basin™

Unlike the low velocity cold-water settling basins common to conventional cooling tower designs, the TTXR tower incorporates a patented perimeter box beam which uniquely serves as both the cold water reservoir and provides the base structural component of the module. High water velocities in the basin beams continually scrub the walls and floor of the basin to eliminate the build-up of sediment and potentially bio-hazardous material – a common problem in conventional designs. Four access ports are provided for easy inspection.

Variable-Flow Rotary Spray Nozzle™

The TTXR Series towers contain Spin-Free™ spray nozzles that delivers even fill coverage across a broad range of system flows. The Spin-Free spray nozzle can perform from 25 GPM to 75 GPM. Spin-Free™ spray nozzles provide a 3-1 turn down from the maximum allowed flow rate. The nozzle requires less pressure to operate than a conventional nozzle, is virtually maintenance free, and dramatically improves tower performance. Debris that typically clogs conventional nozzles will pass directly through the spray nozzle. This is accomplished by the 2" (5.08 cm) nozzle throat/inlet coupled with the brisk rotating agitation action provided by the nozzle's turbine.

The nozzle orifice is shaped to provide a square spray pattern, thereby uniformly wetting the entire fill media. This improves tower performance and reduces the likelihood of scaling due to the occurrence of dry regions within the fill. This flexible capability is not present in fixed orifice spray nozzles; they must remain very near design flow to provide the required spray coverage. While conventional towers require a reduction in cell usage when system flow decreases, TTXR technology permits this reduced flow to be evenly distributed over all available fill area. This results in maximizing cooling capacity and energy efficiency under partial load duties.

Fill & Drift Eliminators

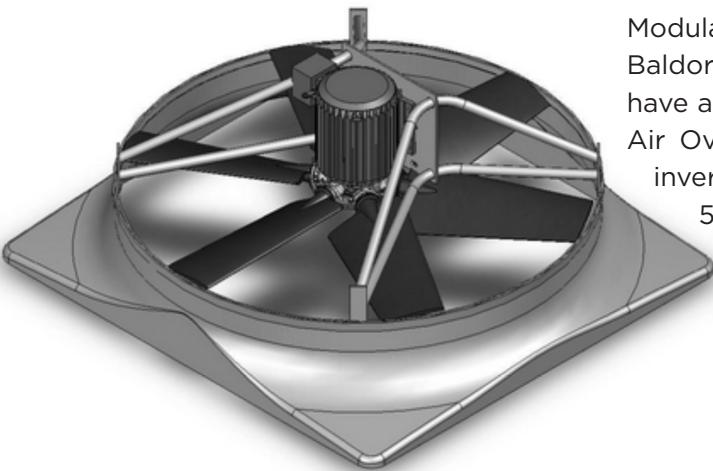

TTXR Series cooling towers are equipped with rigid cross-corrugated, high-efficiency PVC film fill media (10 mil thickness). This fill media is resistant to biological degradation and to most chemicals (inorganic alkalis or acids, as well as organics) common to cooling tower systems. Its high surface area to volume ratio provides optimum heat exchange efficiency. The TTXR tower shell may be equipped with configurations to meet any water quality demand – alternative thermal capacity ratings are available from your Tower Tech design engineer. In addition to PVC, TTXR Series towers may be optionally equipped with HPVC fill suitable for use in “hot water” applications within a working range of 130°F to 155°F (54.4°C to 60°C). Alternative 15 mil thickness material is also available as a specified option.

TTXR Series cooling towers are equipped with low-pressure sinusoidal-wave shaped PVC drift eliminators (15 mil finished thickness). These high-efficiency cells (drift loss guaranteed not to exceed 0.0004%) force the exiting airstream to make three distinct directional changes causing exiting moisture droplets to impinge and coalesce on its high surface areas. The PVC material used in the construction is virtually impervious to rot, decay, or biological attack. An ultraviolet inhibitor manufactured into the product extends the life expectancy.

Motors / Fans / Shrouds

Tower Tech fans use high-efficiency, molded thermoplastic blades with a unique airfoil design resulting in uniform airflow, minimal turbulence, and maximized system efficiency. Adjustable-pitch blades along with lightweight, high-strength cast aluminum-silicon alloy hubs simplify field adjustments. Blade tip tolerances are quality control validated in order to ensure maximum system efficiencies. Tower Tech's stainless steel tubular motor mount provides minimum air turbulence, reduced fan noise, and long life for support of mechanical equipment.

The TTXR Series precision molded fan shroud is manufactured using hand-laid fiberglass techniques. It is engineered to provide a smooth air entry (optimized r/d) and approach velocity. The heavy-duty fiberglass shroud is lightweight and will resist corrosion indefinitely.

Modular Cooling Towers shipped after October 2010 have Baldor direct-drive motors. All standard Baldor motors have a 210T Series size frame, are TEAO (Totally Enclosed Air Over), L10 (100,000 hour) sealed bearings, and are inverter ready. 60 Hz motors have a nominal RPM of 860. 50 Hz motors have a nominal RPM of 715.

All Baldor motors on Tower Tech Cooling Towers shipped after October 2014 also meet IP55 and NEMA MG-1 Parts 30 and 31 requirements. Motor type and power level depends on tower model selected and required design conditions. Standard available motor types:

60Hz 40°C. Available in 3.0 HP, 5.0 HP, or 7.5 HP. Available at 200V, 230V, 460V and 575V.

60Hz 50°C. Available in 3.0 HP, 5.0 HP (2.9kW) or 7.5 HP. Available at 230V, 380V or 460V.

50Hz 40°C. Available in 2.2 kW, 3.7 kW, 4.8 kW or 5.6 kW. Available at 190V-208V, 220V, 380V-415V or 440V.

50Hz 50°C. Available in 2.9 kW or 4.5 kW. Available at 190V-208V and 380V-415V.

Materials of Construction

The Tower Tech TTXR Series cooling tower structure is factory-assembled and constructed entirely of fiberglass and stainless steel hardware, which together provide a rigid shell and framework for the tower that will resist deterioration and corrosion indefinitely. There are no galvanized or wood components which may leak potentially hazardous chemicals into the environment. Walls are joined together by tongue and groove joints and are sealed by a polyurethane sealant to prevent leaks. Stainless steel fasteners employing coated threads (in wetted areas) are used to bolt the walls together and ensure leak-free operation under pressurized operating conditions.

Component	Material
Fill Media	10 mil PVC (std.), 15 mil PVC (opt.)
Drift Eliminators	13 mil PVC (Thermoformed)
Spin Free Nozzle	HDPE & Stainless Steel
Water Distribution Header & Laterals	PVC
Water Collection System	ABS (Injection Molded & Extruded)
Header Inlet Flange	PVC (Injection Molded)
Hardware	304 Stainless Steel
Corner Enclosure	FRP (pultruded)

Component	Material
Shell/Casing	FRP (pultruded)
Sub-Structure Legs	FRP (Pultruded)
Wind Wall Partitions	ABS (Extruded)
Modular Base Support & Footpad	Nylon (Injection Molded)
Fan Shroud	Hand Lay-Up Fiberglass (Flame Retardant)
Sump Box	HDPE (Rotationally Molded)
Inspection Ports	Nylon (Injection Molded)
Motor Support	304 Stainless Steel

Key: FRP = Fiberglass Reinforced Plastic Pultrusion

PVC = Poly-Vinyl Chloride (Self-Extinguishing)

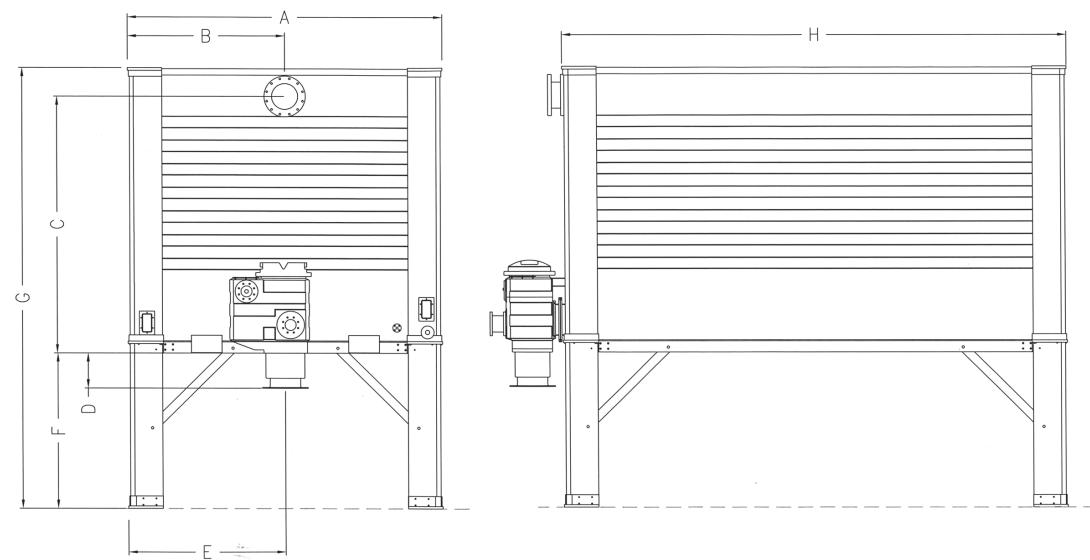

ABS = Acrylonitrile, 1,3-Butadiene, and Styrene Copolymer (Flame Retardant)

HDPE = High Density Polyethylene

- a Dimensions are approximate and should not be used for construction purposes. Consult submittals for exact tower data. Dimension F may be 1'-00" (30.5 cm), 4'-00" (121.9 cm), 6'-00" (182.9 cm), 8'-00" (243.8 cm), 10'-00" (304.8 cm), or 12'-00" (365.8 cm) depending on project requirements. 12'-00" (365.8 cm) may be specified with prior approval of Tower Tech engineering manager only. Dimension F on drawing below is 6'-00" (182.9 cm).
- b Tower weights may vary due to optional equipment, residual water from factory testing, rain, etc. Weights shown are guidelines only and do not include sump, substructure or other accessories not directly attached to the tower module during shipping.
- c TTXR-1219xx requires two sumps. See TTXR-1219xx drawings on Tower Tech website.

^a Baldor motor data. SFA (MMC) refers to Service Factor Amps (Maximum Motor Current). Size VFD for SFA (MMC) when motors will be operated by VFD bypass.

^b Rating is NEMA nominal efficiency. Standard motors, TEAO severe duty, direct drive, with L₁₀ 100,000 hour sealed bearings, inverter duty, with quantum shield wiring, class "H" insulation (minimum). Motors meet NEMA MG-1 Part 31 requirements for inverter duty use.

^c Metric dimensions approximate.

^d Flow rates above 2,700 gpm require engineering review and may require two sump containers.

^e TTXR-12 requires two sump containers. See TTXR-12 drawings for details.

^a Baldor motor data. SFA (MMC) refers to Service Factor Amps (Maximum Motor Current). Size VFD for SFA (MMC) when motors will be operated by VFD bypass.

^b Rating is NEMA nominal efficiency. Standard motors, TEAO severe duty, direct drive, with L₁₀ 100,000 hour sealed bearings, inverter duty, with quantum shield wiring, class "H" insulation (minimum). Motors meet NEMA MG-1 Part 31 requirements for inverter duty use.

^c Metric dimensions approximate.

^d Flow rates above 2,700 gpm require engineering review and may require two sump containers.

^e TTXR-12 requires two sump containers. See TTXR-12 drawings for details.

60 Hz, 40°C., 200V, 230V, 460V or 575V

Optional Equipment

Motor Pre-Wire

TTXR Series Modular Cooling Towers™ are shipped with motors factory pre-wired to a central junction box (NEMA-4X). Motors can be factory pre-wired to individual “lock-out/tag-out” rotary disconnect switches. Motors can also be pre-wired to a pre-mounted Motor Protection Panel (see description below). Motor wiring used is Alpha brand shielded 12-4 AWG (10-4 AWG used where Maximum Motor Current is 30 amps or higher), VFD compatible, liquid tight flexible cable.

Sub-Structure Kits

Each Modular Cooling Tower has a 1-foot (30.5 cm) high stub leg kit for mounting on customer furnished support structure. As an option, towers can be furnished with leg kits from 4 feet to 12 feet (121.9 cm to 365.8 cm) in height. The most common configuration uses 6-foot (182.88 cm) high legs to allow convenient access to the fan inlet of the tower for inspections and maintenance. Sub-structure kits include FRP legs with integrated footpads (Nylon), angle braces (FRP), and stainless steel assembly hardware; and are shipped loose for installation at the time of delivery and tower installation.

Motor Protection Panel

Motor Protection Panel (MPP) is a UL-Rated NEMA 4X (FRP) and is designed for single point connection. The NEMA 4X panel includes power distribution to individual motor protectors with lockout disconnect, magnetic overload protection, and solid-state adjustable thermal overload protection. Each manual motor protector has an auxiliary relay to monitor the fault status of each motor. The NEMA 4X panel also provides a main non-fused disconnect with through the door operator handle. The MPP is pre-wired to the motors and pre-mounted on the cooling tower.

Control Panels

Panels are high quality, UL rated, NEMA 4 enclosures (epoxy painted steel) equipped for single-point wiring to a manual disconnect. Each control panel includes power distribution to individual motor starters with lockout disconnect, magnetic overload protection, and solid-state adjustable thermal overload protection. Each manual motor protector has an auxiliary relay to monitor the fault status of each motor. A solid-state PLC is provided for supply water temperature control with a door-mounted operator interface through a touchscreen display panel. An RTD temperature sensor is provided for remote mounting in the customer's tower discharge piping.

Standard water temperature control is done with fan staging through the pre-programmed PLC.

Variable Frequency Drives

Optional water temperature control can be done with a remote mounted variable frequency drive (VFD) suitable for multiple motor operation. The VFD can be operated with a Control Panel or Motor Protection Panel.

Operating Tower Tech cooling tower fans through a VFD provides the tightest temperature control possible at the very lowest energy consumption. When operated with variable water flow, the combination of the VFD and the variable flow Rotary Spray Nozzle™ provide energy saving opportunities that no other cooling tower can match. Contact your Tower Tech sales representative for details on a Performance and Competitive Evaluation (PACE) report.

Basin Heaters

Stainless steel electric immersion heaters are recommended when operating in low ambient temperature conditions in order to protect against basin freezing when the tower is shut down. A NEMA 4X control panel is provided to control up to four individual elements (6 kW each). A remote temperature sensor is provided for mounting in the tower basin and the controller is preset to 45°F (7.2°C). All heating elements must be located within the same tower water basin as the sensing element. Threaded flanges are installed in the tower's cold water basin for mounting each heating element and the temperature sensor. The control panel must be field mounted and wired to each heating element and the temperature sensor. A power source separate from the cooling tower fans is recommended.

Level Control

When water level control is needed in the TTXR tower module, the standard level controller is a mechanical valve actuated through a float mounted on a short rod located in the external sump container which is attached to the terminal end of each tower module. To function correctly, the mechanical float valve requires inlet water pressure of 25 psi (or less) applied at the valve inlet. The use of a pressure reducing valve is necessary when the inlet water supply exceeds 25 psi.

If a non-contact water level control is desired, a pre-engineered, self-contained ultrasonic liquid level control package is optionally available. The package consists of a continuous measuring ultrasonic device combined with a controlling relay, an LCD screen, and a stilling well mounting pipe. The stilling well pipe is mounted in the tower's equalization/overflow piping. The ultrasonic device operates on an analog 4-20mA circuit to the relay/LCD which sends command signals to the solenoid valve (solenoid valve not supplied). The LCD screen shows the water level and the indicator lights show whether the solenoid valve is commanded ON or OFF.

Seawater Applications

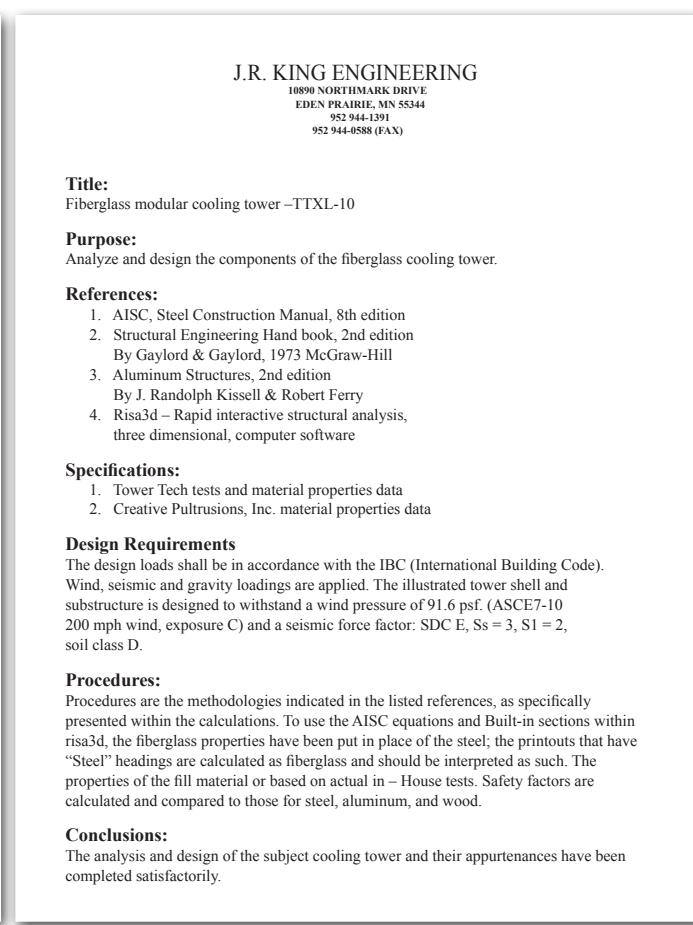

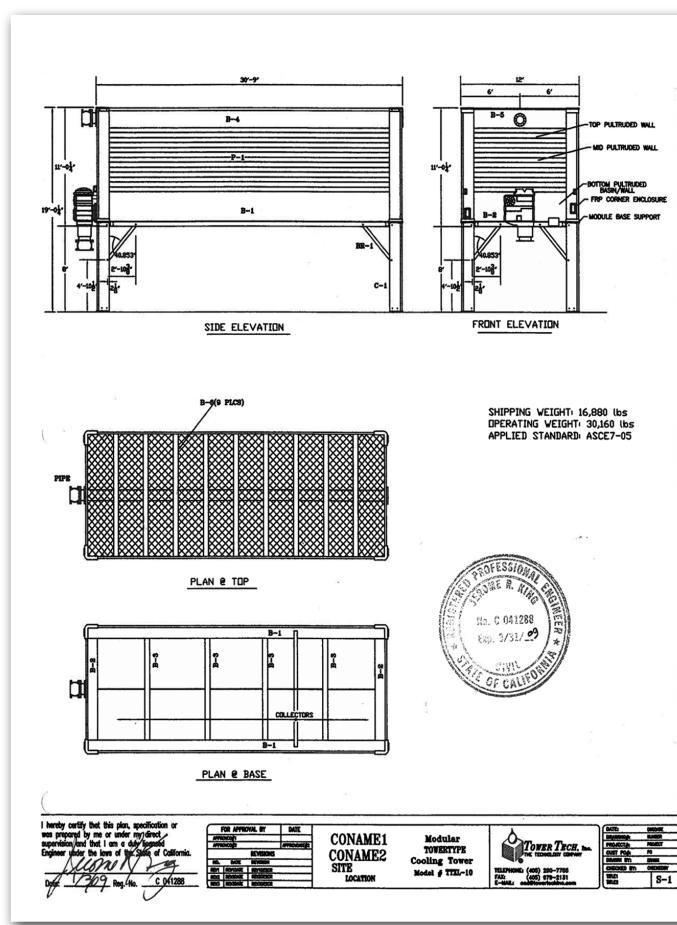

Tower Tech modules are the best solution available for cooling with seawater. All of the structural and internal components are inert in the presence of seawater. Even 304 Stainless Steel is aggressively attacked and corroded by the chlorides in seawater. Tower Tech offers a wide selection of fouling resistant fills and a 316 Stainless Steel hardware option to assure long life and low maintenance for your operations. There will be a thermal capacity (gpm/lps) derate depending on the salinity content of the cooling water. Contact your Tower Tech representative for solutions to match your specific application.

Engineering Certifications

Certified calculations are available for all models with substructures up to 8 feet (243.8 cm) for seismic and wind loading in accordance with the International Building Code's most severe requirements. Wind, seismic and gravity loadings are applied. The illustrated tower shell and substructure is designed to withstand a wind pressure of 91.6 psf. (ASCE7-10 200 mph wind, exposure C) and a seismic force factor: SDC E, $S_s = 3$, $S_1 = 2$, soil class D.

Tower Tech has received preapproval from OSHPD for Special Seismic Certification under approval number OSP-0289-10. The Tower Tech Cooling Tower Product Line (on 1ft legs and 4ft, 6ft, and 8ft braced support legs) meets the requirements for Special Seismic Certification by seismic testing according to CBC-2010 Section 1708A.4 and IBC 2009 Section 1708.4 for ground level (SDS = 2.30 for 1ft legs and SDS = 2.0 for 4ft, 6ft, & 8ft braced legs) and rooftop (SDS = 1.35 for 1ft legs and SDS = 1.25 for 4ft, 6ft, & 8ft braced legs) installation for $Ip=1.5$. The product line was qualified by time history shake table testing of four towers on varied support legs according to the procedures outlined in ICC-ES AC156.

Tower Tech has performed extensive acoustic testing in accordance with CTI Standard ATC-128 using licensed Acoustical Engineers. Sound data for all Tower Tech models is available. Computer simulated site specific 3D sound modeling is also available through your Tower Tech representative.

The thermal performance of the TTXR Series cooling towers is certified by the Cooling Technology Institute in accordance with its standard STD-201 and has been assigned CTI certification validation number 08-17-16. This certification is your assurance that the proposed capacities accurately reflect actual cooling tower performance. CTI certification under STD-201 is limited to thermal operating conditions with entering wet bulbs between 55°F and 90°F (12.8°C and 32.2°C), a maximum process fluid temperature of 125°F (51.7°C), a cooling range of 4°F (2.2°C) or greater, and a cooling approach of 5°F (2.8°C) or greater.

Our vision is to be the most customer-driven cooling tower company in the world -- the standard by which all other cooling tower companies are measured.

We are committed to preserving and protecting the environment by leading our industry in water and energy conservation and environmental responsibility.
